Rows remaining after each of the eleven cleaning steps
1. Property extraction & range filtering
1,996,047
2. Resistivity → conductivity merge
1,996,047 (100% kept)
3. Temperature filtering 300-800K
1,096,324 (55% kept)
4. One row per material and T bin
398,763 (36% kept)
5. Formula cleaning
393,381 (99% kept)
6. zT self-consistency check
388,669 (99% kept)
7. Computational-paper exclusion
387,683 (100% kept)
8. Multi-source consistency filtering
308,998 (80% kept)
9. MAD outlier filter
289,637 (94% kept)
10. Min. temperature coverage
284,987 (98% kept)
11. Smoothness filter
280,664 (98% kept)
